

Marketing Audit Report

<https://webar.up.railway.app>

Generated: June 13, 2026

Overall Marketing Score: 48/100 (Grade: F)

ARVision has an excellent, outcome-focused product story ("Upload a model. Get an AR-ready link.") that is undermined by an almost non-existent marketing surface. The score is dragged down by discoverability and shareability, not by the product: there is no meta description, no Open Graph or Twitter card, no structured data, no robots.txt and no sitemap. Most critically, the core growth loop is sharing AR model links, yet shared pages carry zero social preview. Fixing rich link previews (using the thumbnails the app already generates), the SEO foundation, and a trust and use-case layer would lay the groundwork for a 20 to 50 percent top-of-funnel lift on a share-driven tool.

Score Breakdown

Category	Score	Weight	Status
Content & Messaging	62/100	25%	Needs Work
Conversion Optimization	58/100	20%	Needs Work
SEO & Discoverability	28/100	20%	Critical
Competitive Positioning	45/100	15%	Critical
Brand & Trust	40/100	10%	Critical
Growth & Strategy	48/100	10%	Critical

Key Findings

Severity	Finding
Critical	Shared model pages (the /view/ID route) and the /embed/ID route have NO Open Graph or Twitter cards. The product's core loop is sharing AR links, but pasted links show no image, title, or thumbnail on WhatsApp, iMessage, LinkedIn or X. Model thumbnails are already generated (serve_thumbnail) but never wired into the page head.
Critical	No SEO foundation: zero meta descriptions across all templates, no JSON-LD structured data, no robots.txt route, no sitemap route. Homepage title is generic ('Home - arvision'). The site is near-invisible to search engines and link unfurlers.
High	AI generation, the strongest acquisition hook, is gated behind login ('Sign in to start' / 'Login to generate') before the user ever sees an example output. The wow-moment happens after the wall.
High	No social proof anywhere (no conversion counter, testimonials, or logos) and no trust or privacy statement, despite asking users to upload proprietary 3D assets.
Medium	Split identity: the landing reads as three products at once (format converter, AR host, and AI generator) with no unifying category or differentiation framing.
Medium	Feature cards are feature-led ('Multiple Formats', 'Fast Conversion') rather than benefit or outcome-led, and there is no use-case framing to help visitors self-qualify.
Medium	Growth loops underpowered: no public model gallery, no embed attribution ('Powered by ARVision'), no referral, no email onboarding for registered users whose history already persists.
Low	Minimal brand expression (lowercase wordmark, no about, team, or mission page).

Prioritized Action Plan

Quick Wins (This Week)

1. Add Open Graph and Twitter card meta to view.html and embed.html, using the existing thumbnail route as og:image, the model name as og:title, and a short description - turns every shared link into a rich preview.
2. Rewrite the homepage title from 'Home - arvision' to 'ARVision - Turn 3D models into shareable AR links' and add a 150-character meta description with the value prop.
3. Add robots.txt and sitemap routes so search engines can crawl and public model pages become discoverable.
4. Generate a branded homepage OG share image (use the installed web-asset-generator skill) and reference it on index.html.
5. Surface a live social-proof counter near the hero ('12,480 models converted') - the data is already in the DB.
6. Add 2-3 use-case lines under the hero: 'For e-commerce product pages, for architecture and furniture, for classrooms.'

Medium-Term (1-3 Months)

1. Pick and own one category: lead with a single job ('the fastest way to put your product in AR') and frame conversion and AI as how, not what.
2. Build a public opt-in model gallery: indexable SEO surface plus social proof plus referral surface, where each shared model is an ad.
3. Implement an email onboarding sequence (welcome, upload first model, share your AR link, try AI generation) for registered users.
4. Run a landing-page CRO pass: trust signals near the upload CTA, a 10-second demo GIF of an AR-ready link, and simpler first-time format and size options.

Strategic (3-6 Months)

1. Content and SEO play around format pain: 'how to view an STL/FBX/OBJ in AR', 'convert OBJ to GLB', 'USDZ for iPhone AR' - high-intent, low-competition queries that match exactly what ARVision does.
2. Productize the share loop: polished embeddable AR viewer with subtle 'Powered by ARVision' attribution so every customer embed becomes a growth channel.
3. Segment-specific landing pages (for-e-commerce, for-architecture, for-education) with tailored copy and examples off the same converter.

Competitive Landscape

	ARVision	Sketchfab	Vectary	model-viewer (DIY)
Positioning	ARVision	Publish and share 3D models	Browser 3D and AR design	Open-source AR web component
Pricing	ARVision	Freemium plus Pro tiers	Free plus paid plans	Free / self-host
Social Proof	ARVision	Large creator community, brand logos	Brand logos, templates	Google-backed, dev adoption
Content	ARVision	Deep SEO, rich link preview	Deep SEO plus tutorials	Docs only, no hosting or share

Methodology

This audit evaluates six key dimensions of marketing effectiveness. Each category is scored 0-100 based on industry best practices and competitive benchmarks.

Category	Weight	What We Measure
Content & Messaging	25%	Copy quality, value proposition clarity, CTA effectiveness
Conversion Optimization	20%	Funnel design, forms, social proof, friction reduction
SEO & Discoverability	20%	On-page SEO, technical SEO, content structure
Competitive Positioning	15%	Market differentiation, pricing, alternatives strategy
Brand & Trust	10%	Design quality, trust signals, authority indicators
Growth & Strategy	10%	Pricing strategy, acquisition channels, retention
